

ENERGY SAVING TIPS

Reducing your energy consumption doesn't have to start with big changes. Small changes in your organisation, can make a huge difference.

Turn off appliances that are on standby mode

This small change could reduce your electricity consumption by an average of 2.5%.

Check for draughts and report any cracks at work

Draft proofing a building could reduce your heating consumption by as much as 15%.

Switch to energy efficient LED bulbs

The amazing thing about making this switch is that you can reduce the amount of energy you use for lighting by nearly 90%.

Only boil water you need

If we all only boiled the water we needed for a cup of tea, we'd save enough electricity a year to power the UK's street lights for a month.

Get in touch to take advantage of our free desktop energy audit.

This is where we check for anything that could be causing overcharges on your current billing. We have saved some organisations thousands of pounds from a simple desktop audit.
