

Excellent Support for Reducing Energy Consumption!

“

Our Charity has used the services of Utility Aid over a number of years- energy brokerage and solving problems with suppliers- and found them unfailingly helpful. Most recently, we have used their Remote Building Assessment to obtain guidance on how we might reduce the energy consumption of our very old building. After a tour of our building via a video link with an Energy Assessor, we received a comprehensive report on what improvements, large and small, we could make, and their sustainability, which was followed by a discussion with the Assessor. I have learnt so much from this process. With the support of the report, I feel much better equipped to work with my fellow Trustees to reduce the carbon footprint of our Village Hall.
